OUTSTANDING ALTERNATIVES IN STATIC CONTROL

To Whom It May Concern,

According to ANSI/ESD S20.20-2007, the compliance verification procedure for continuous monitors are "manufacturer defined". The following procedure is used for compliance for the Resistance Ranger Series Constant Monitors from Transforming Technologies:

The Resistance Ranger constant monitors (part numbers CM1600, CM1601, CM1602, CM2815, CM2800) are factory calibrated and do not require annual re-calibration. It is recommended to verify the calibration with the CM2015PV periodic verification unit (CM2015PV) at least once per year.

The CM2015PV constant monitor verification units are factory calibrated and do not require annual re-calibration. The CM2015PV use fixed 5% tolerance resistors and values can be verified by comparing them to 3% tolerance resistors although this procedure is not recommended. If the CM2015PV is unable to operate, contact Transforming Technologies for more information.

For questions, please contact customer service at 419-841-9552.
